

Disaster Recovery & Restoration Cords

When fires, tornadoes, hurricanes, flood damage or other severe disasters devastate structures, readily available power for heavy equipment is limited. In disaster recovery, the ability to utilize electrical equipment in remote areas helps emergency response; building recovery and restoration efforts. In most cases, the only reliable sources of significant power are 125/250V range and dryer outlets, or portable generators. Coleman Cable, Inc. provides the industry's widest offering of safe, convenient extension cords and adapters to convert these non-standard power outlets into usable 125V power.

These new Disaster Recovery and Restoration Cords allow emergency response teams and contractors to convert dryer, range or generator outlets into usable power for larger equipment or temporary power distribution boxes. The NEMA 14-30P (30A dryer outlet); NEMA 14-50P (50A range outlet) and NEMA L14-30P (30A generator) cords offer either a NEMA L14-30R (receptacle) or a 50A Twist Lock receptacle to energize temporary power distribution boxes. All cords complement Coleman Cable's full-product offering of Temporary Power Distribution X-Treme™ Boxes; Polar-Solar®; Yellow Jacket®; Generator Power; Twist-To-Lock; "Y" and "W" Extension Cords and Adapters.

Features & Benefits

- Hard-Usage and oil resistant cable jackets withstand harsh environments
- Molded NEMA 14-50P plugs provide ultimate dust and strain-relief

Applications

For use in disaster recovery, restoration, renovation or maintenance projects requiring temporary, portable power in:

- Residential
- Commercial & Industrial
- Municipal
- Utility
- Emergency Response
